

POWER BI VISUALIZATIONS

MODULE 5: DESKTOP VIEW AND PHONE VIEW REPORTS

Dataset Used: Retail Store Dataset

Tables:

- Customers
 - Orders
 - Products
 - Sales
 - Stores
-

Learning Objectives

After completing this session, students will be able to:

- Understand Desktop Report View
 - Understand Mobile Report View
 - Design Responsive Dashboards
 - Optimize Visual Placement
 - Create Mobile-Friendly Reports
 - Publish Professional Dashboards
-

PART 1: UNDERSTANDING REPORT VIEWS

What is Report View?

Definition

Report View is the area where we create dashboards and reports using charts, tables, slicers, cards, maps, and other visuals.

Power BI allows us to design reports for:

1. Desktop Screens
 2. Mobile Devices
-

Why Do We Need Different Views?

A dashboard designed for a laptop screen may not look good on a mobile phone.

Example:

Desktop Screen:

- Large display area
- Multiple visuals visible together
- Suitable for detailed analysis

Mobile Screen:

- Small display area
 - Requires vertical layout
 - Suitable for quick insights
-

PART 2: DESKTOP REPORT VIEW

What is Desktop View?

Desktop View is the default report layout used while designing reports in Power BI Desktop.

Most dashboards are created in Desktop View first.

Features of Desktop View

Large Canvas

More space for visuals.

Detailed Analysis

Multiple charts can be displayed.

Better Comparisons

Users can compare many visuals simultaneously.

Dashboard Design

Ideal for business reporting.

Practical 1: Create a Desktop Dashboard

Business Requirement

Create a Retail Sales Dashboard.

Step 1

Go to:

Report View

Step 2

Add KPI Visuals

Create:

- Total Revenue
- Total Profit
- Total Orders
- Unique Customers

Place them at the top.

Step 3

Add Revenue by Brand Chart

Visual:

Clustered Column Chart

Axis:

Products[Category]

Values:

[Total Revenue]

Step 4

Add Revenue by Store Chart

Visual:

Clustered Bar Chart

Axis:

Stores[StoreName]

Values:

[Total Revenue]

Step 5

Add Revenue Trend

Visual:

Line Chart

Axis:

Orders[OrderDate]

Values:

[Total Revenue]

Step 6

Add Slicers

Create:

- Brand Slicer
 - Store State Slicer
 - Gender Slicer
-

Result

Complete Desktop Dashboard.

Recommended Desktop Layout

Top Section:

- Total Revenue
- Total Profit
- Total Orders
- Unique Customers

Middle Section:

- Revenue by Brand
- Revenue by Store

Bottom Section:

- Revenue Trend
 - Matrix Visual
-

Desktop Dashboard Best Practices

Keep Similar Visuals Together

Revenue visuals should stay together.

Use Consistent Colors

Maintain professional appearance.

Keep Slicers at the Top

Easy access for users.

Avoid Overcrowding

Do not place too many visuals on one page.

PART 3: PHONE REPORT VIEW

What is Phone View?

Phone View is a mobile-optimized version of a Power BI report.

It allows reports to be viewed properly on mobile devices.

Why Phone View is Important?

Many managers view reports using:

- Mobile Phones
- Tablets
- Power BI Mobile App

A report that looks perfect on desktop may look broken on a phone.

Phone View solves this problem.

Features of Phone View

Vertical Layout

Visuals are arranged vertically.

Mobile Friendly

Optimized for small screens.

Touch Friendly

Easy to interact with.

Faster Navigation

Important KPIs appear first.

Practical 2: Create Phone View

Step 1

Go to:

View

Step 2

Select:

Phone Layout

Result

A blank phone canvas appears.

Power BI displays all visuals created in Desktop View on the right side.

Step 3

Drag KPI Cards First

Arrange:

1. Total Revenue
 2. Total Profit
 3. Total Orders
 4. Unique Customers
-

Step 4

Add Important Charts

Arrange:

1. Revenue by Brand
 2. Revenue by Store
 3. Revenue Trend
-

Step 5

Add Slicers

Place them after KPI visuals.

Result

Mobile-friendly dashboard.

Recommended Phone Layout

Top Section:

- Total Revenue
- Total Profit
- Total Orders
- Unique Customers

Middle Section:

- Brand Slicer
- State Slicer

Bottom Section:

- Revenue by Brand
 - Revenue by Store
 - Revenue Trend
-

Desktop vs Phone View

Desktop View	Phone View
Large Canvas	Small Canvas
Horizontal Layout	Vertical Layout
Multiple Visuals Visible	One Visual at a Time
Detailed Analysis	Quick Insights
Mouse Friendly	Touch Friendly

Practical Exercise

Create a Desktop Dashboard containing:

KPI Section

- Total Revenue
- Total Profit

- Total Orders
- Unique Customers

Analysis Section

- Revenue by Brand
- Revenue by Store
- Revenue Trend

Filters

- Brand
 - State
 - Gender
-

Mobile Optimization Exercise

Create a Phone Layout for the same dashboard.

Arrange visuals in this order:

1. Total Revenue
 2. Total Profit
 3. Total Orders
 4. Unique Customers
 5. Brand Slicer
 6. State Slicer
 7. Revenue by Brand
 8. Revenue by Store
 9. Revenue Trend
-

Real-World Scenario

Imagine you create a dashboard for a Retail Company.

The CEO may view it on:

- Laptop in Office
- Mobile Phone while Traveling

Therefore every professional Power BI developer should design:

- Desktop View
- Phone View

before publishing the report.

Interview Questions

What is Desktop View?

Default report layout used to design dashboards.

What is Phone View?

A mobile-optimized version of a report.

Why is Phone View important?

It improves report usability on mobile devices.

Where can Phone Layout be accessed?

View → Phone Layout

What should appear first in Phone View?

Important KPIs and business metrics.

Difference Between Desktop and Phone View?

Desktop is designed for large screens, while Phone View is optimized for mobile devices.

Learning Outcome

Students can now:

- Create Desktop Dashboards
- Create Phone Layouts
- Optimize Reports for Mobile Devices
- Design Professional Business Reports
- Build Responsive Power BI Dashboards

Congratulations!

You have completed the Power BI Visualization and Dashboard Design Module.
